

The Milan Cemetery Association installed an above ground columbarium. It is made of Georgia blue granite with a polished black granite face. This unit has a total of 64 each 12"x12"x12 "niches" and is divided into two sides. Two cremations may be placed in one niche, It stands about 6 feet tall.

We have limited space for burials at the cemetery, so this will help that issue greatly. Columbariums are become very popular throughout the country and we expect a lot of interest once people view how good it is in appearance and realize that it will also be conserving valuable space.
